RESEARCH INTERESTS

- **Battery management systems**
Electrochemical batteries are employed in a wide spectrum of devices, ranging from mobile systems to electric vehicles. I have studied battery management systems, focusing on remaining usable capacity estimation, hybrid energy storage system design, and sensing techniques that leverage battery information.
- **On-device machine learning**
Training and inferring DNN models on mobile devices are critical for mitigating various problems, such as privacy and network issues, in ML-based applications. I have studied on-device machine learning techniques with a focus on energy efficiency with DNN architectures capable of adaptive inference.
