## RESEARCH INTERESTS

---

- **Battery management systems**  
Electrochemical batteries are employed in a wide spectrum of devices, ranging from mobile systems to electric vehicles. I have studied battery management systems, focusing on remaining usable capacity estimation, hybrid energy storage system design, and sensing techniques that leverage battery information.
- **On-device machine learning**  
Operating DNN models on mobile devices is critical for mitigating various problems, such as privacy and network issues, in ML-based applications. I have studied machine learning techniques with a focus on energy efficient on-device inference with DNN architectures capable of adaptive operation.
